

Clinical Project Manager

Artiria Medical SA is a start-up company active in the field of neurovascular technology. Artiria's objective is to establish a new standard of care to fight stroke and save lives. 12 million people suffer a stroke every year. This brain pathology often leads to severe disabilities and death. Artiria develops a cutting-edge medical device using the patient's arteries as an access route to smoothly reach the brain and locally deliver life-saving treatments.

Artiria Medical is looking for a talented **Clinical Project Manager** to contribute to the clinical development of the company

KEY TASKS AND RESPONSIBILITIES

- Lead the clinical study activities of the company in accordance with regulatory and ethical standards
- Write and amend the clinical study documentation (in collaboration with external stakeholders)
- Lead the submission of clinical study documentation to ethical committees (Switzerland, and abroad)
- Manage the relationship with contract research organizations (CROs)
- Collect and organize data obtained from clinical study according to best practices for data privacy and regulatory compliance (as per FDA / MDR guidelines)
- Actively collaborate with the study team (training on medical device, support during the procedures)
- Provide feedbacks from the study team to the product development team to ensure continuous product improvement
- Ensure the rigorous implementation of the clinical processes as per established procedures (SOPs) defined by the Quality Management System
- Affinity with R&D activities (the position might include involvement in R&D tasks)
- Cultivate creativity

QUALIFICATIONS

- Master's degree in Biomedical engineering, medicine, nursing, or related field
- Experience (2-5 years) in clinical project execution, preferably in medical device industry (class II & III)
- Knowledge of ICH-GCP, understanding of US and European medical device clinical trial approval procedures
- Background in endovascular technology and/or neuroengineering is a plus
- Independence and strong organizational skills: attention to details and accuracy
- Strong commitment to work in a Startup environment
- Good team player
- Languages: English and French, written and spoken

WE OFFER

- A job that makes sense! Contribute to a product that can save people's lives
- A dynamic and experienced team of entrepreneurs, scientists and MedTech experts to work with
- The possibility to grow professionally with the company
- A flexible work environment
- A permanent position
